The Problem

The slumber that clears. The mind that arrives. Every day, coffee creates the conditions for our best work and our most human moments. But that lift follows a curve, not a straight line. Beyond a personal threshold the gains reverse: agitation replaces calm, and long after the cup is finished, the same compound that sharpened the afternoon quietly steals the night.

The Reaction

So they stop. Not because the work is done, but because too many restless nights taught them that another cup after a certain point is a gamble. What they give up is real: the meeting that needed one more hour of sharp thinking, the afternoon that could have finished strong instead of fading quietly away.

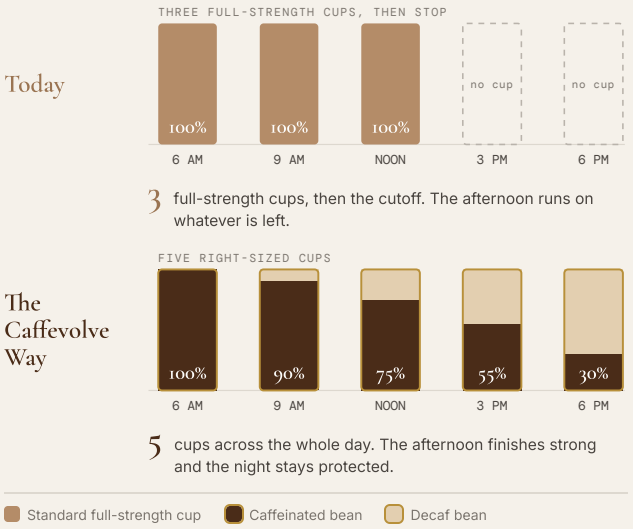

The Answer

Every coffee drinker has a personal caffeine threshold, a limit set by their own body before caffeine starts working against them. Each morning, that threshold becomes a daily allowance: a budget you draw from, cup by cup. Each standard cup claims a fixed slice, so the choice has always been binary. “Yes, I’ll have another cup.” Or, “No, I really shouldn’t.” Period.

Caffevolve draws on that same budget with far more precision. It calculates the right caffeine dose for every cup, stretching the same threshold across more hours of the day. **Not fewer cups. More cups, each one right-sized.**

Three cups to five, the Caffevolve way.

Caffeinated share of each cup across one day

Caffevolve™

CAFFEINE MANAGEMENT & DELIVERY PLATFORM

Coffee Without a Curfew

ONE SYSTEM · THREE COMPONENTS

Each incomplete alone. A brewer with no intelligence is just a coffee maker. Intelligence with no device can recommend, but can’t act.

01 · THE BRAIN

Platform Intelligence

Learns your caffeine thresholds, tracks what’s already active in your system versus your daily budget, and calculates the right dose for every cup so the budget can last all day.

02 · THE PLATFORM HOME

Precision Brewing Device

Executes the caffeine recommendation precisely by dispensing, blending and grinding the beans, then brewing to SCA standards for a consistently delicious cup, every time.

03 · OUT THE DOOR

Away from Home Guidance

CaffevolveGo, the mobile app that follows you, so every cup you consider away from home gets the same personalized guidance as one brewed there.

What no one else has built

EVERY FEATURE BELOW RUNS IN THE WORKING PROTOTYPE

01 Caffeine Behavior Instrument

Plain, everyday questions (how many drinks before you feel wired, the latest caffeine that still lets you sleep) become a personal Wake Hours Ceiling, Bedtime Ceiling and Caffeine Decay Rate. No lab test, no wearable.

`Prototype · su8Compute()`

02 Dual-ceiling blend engine

Each cup is tested against both limits at once: will it overstimulate right now, and what will still be active at bedtime? The strongest blend that clears both becomes the recommendation.

`Prototype · computeRecommendedBlend()`

03 A live 24-hour caffeine standing

Every logged cup, home or away, decays at the person’s own rate, and leftover caffeine carries past midnight into the next day. Recommendations always start from the whole picture.

`Prototype · eceDecayedMg(), getHalfLifeMins(), midnight carry-forward`

04 Blend-then-grind brewing

Two hoppers, one caffeinated and one decaf, feed a single grinder so caffeine is evenly distributed. Flavor and wellness additives are released into the coffee stream. Filed as patent-pending apparatus claims.

`Prototype · hopperConfig (A caffeinated, B decaf)`

05 Offsite Advisory System

In front of a menu, the user picks worksite, coffee shop or convenience store. CaffevolveGo shows the full venue menu and ranks first the drinks that fit, before the order is placed.

`Prototype · oasCompute(), oasRenderDrinks()`

06 Plan my Day

Lay out the whole day and see its peak and bedtime level before the first cup. Protect the one drink you won’t give up, and one tap suggests the smallest changes that bring the day back under. A saved plan resurfaces at each brew.

`Prototype · pmdProject(), pmdComputeFix(), pmdReminderMatch()`

Prototype references name the functions in the Caffevolve UX prototype that implement each feature. The five-cup day is an illustrative platform output for one profile. Caffevolve™ is a patent-pending platform built for licensing to premium appliance manufacturers.

HOW IT IS DIFFERENT

Everything else *remembers.* Caffevolve *reasons, and acts.*

	CONNECTED PREMIUM MACHINES	CAFFEINE-TRACKING APPS	DECAF & HALF-CAF	CAFFEVOLVE
Learns how **you** respond to caffeine	—	Some	—	✓
Tracks caffeine still in your system	—	✓	—	✓
Protects tonight's sleep before you drink	—	Partly	By removing caffeine	✓
Changes the caffeine inside the cup	—	—	One fixed ratio	**Every cup**
Brews the recommendation	✓	—	✓	✓
Advises at work and the café	—	Logging only	—	✓

Connected machines save your favorite drink and start from your phone. Tracking apps can count caffeine but cannot change the cup. No existing product pairs a brewer, an app and a reasoning layer to manage caffeine.

THE MOAT

The housing can be copied. The mechanisms and the intelligence cannot.

- **Two provisional patents filed**, February 2026 (USPTO 63/975,562) and June 2026, with utility filing targeted for Q4 2026.
- **Seven independent and eleven dependent claim candidates** across hardware, method and system: blend-then-grind, in-stream additives, the behavior instrument, the dual-ceiling engine, adaptive feedback and the offsite advisor.
- **CAFFEVOLVE™ trademark**, Class 11, Notice of Allowance issued.
- **The account follows the person**, not the machine, across every licensee's hardware. No single manufacturer can build that alone.

A competitor can copy the box. Matching the result means performing the claimed process.

THE MARKET-ENTRY PLAN

Commercial first. *The office and café sell the home.*

Selling a home unit cold asks a buyer to pay for an unfamiliar experience before they have felt it once. So Caffevolve launches where people already drink their afternoon coffee and lets them live inside the full platform, every day, at zero personal risk. Each commercial placement is an onboarding engine, not a demo.

STEP 1 · OFFICE

The sharp tip

One buyer, the employer, equips a whole office at once from the amenity budget that already funds the espresso machine. Every workday cup builds an employee's profile, right where the afternoon cutoff hurts most.

CULMINARA OFFICE

→

STEP 2 · CAFÉ

The scale

A self-serve station away from the barista line. Drip customers are served in seconds, the espresso queue moves faster, and each installed device introduces the platform to potentially hundreds of people.

CULMINARA CAFFÈ

→

STEP 3 · HOME

The conversion

By the time they shop, their profile already knows them. The home purchase stops being a new gadget and becomes continuity of something that already works, which makes the consumer arena warm instead of cold.

ORIGINARA · ADVANCARA

Every device makes every profile more valuable, and every profile makes the next device easier to justify.

Why this isn't Keurig's office play. Keurig's office unit introduced a generic machine. A Caffevolve placement builds a personal profile at work that the user carries home, a switching cost the commercial channel creates on the licensee's behalf.

TODAY	NEXT	THEN	LATER
Personalized brewing at home and in the office, with CaffevolveGo advising away	Phone-first setup, and one profile on more than one device	Caffevolve Passport: walk up to any opted-in device and pick up where you left off	Pay from your phone and skip the queue

In the prototype today: an office device brews against the same personal profile and logs to the same day (officeBrew(), setOfficeCaffevolve()); four device tiers are configured (DEVICE_TIER). Next, Then and Later are planned Version II features; "Passport" is a working name.

Asset-light licensing

Caffevolve does not build appliances. It licenses the complete platform to premium manufacturers and earns a royalty on every unit sold. Tiers differ in scale (capacity, profiles, additives), never in intelligence. Licensing targets include Breville, De'Longhi, Jura, Philips, Ninja and Fellow.

Named as targets for licensing conversations, not existing partners.

The shelf it sits on

$7.4B
Premium espresso & capsule machines, 2025, ~5%/yr

$1.1B
Super-automatic bean-to-cup, 2024, ~7%/yr

Global. Fortune Business Insights (2026); DataHorizzon Research (2024). The connected, app-paired slice is growing fastest but is not yet consistently measured.

Five-year royalty model

~$0.7M	~$1.7M	~$4M+
1 licensee	2 licensees · base	4 licensees

Cumulative, seeded demand only, with direct home sales held at zero. Commercial units carry about 79% of base-case royalty. A directional model, not a forecast.

THE ASK

$250,000 pre-seed

FIVE $50K POST-MONEY SAFES · $6M CAP · MFN + PRO RATA

Built before funded. A single founder with a prior successful exit and coffee-industry operating experience has taken the platform this far without outside capital: a 150+ screen interactive prototype past its 200th iteration, two provisional patents, an allowed trademark, a full platform reference and a live site at caffevolvetech.com.

Brent Langevin, Founder · Caffevolve Inc. · brent.langevin@caffevolvetech.com

USE OF FUNDS · 18 MONTHS

Hardware & engineering: three proof-of-concept units of the brewing device and CaffevolveGo, plus manufacturability review	**$110K**
IP prosecution, the utility patent filing and trademark work	**$50K**
Founder expense reimbursement and supplemental compensation	**$70K**
Contingency for hardware and legal timelines	**$20K**

Goal: secure full IP protection and bring the platform to its first licensee agreement.

Confidential. Provided under NDA. Not an offer to sell securities. Royalty figures are directional outputs of the Caffevolve royalty model, not forecasts. Market figures are as published by each firm. Full terms are in the Pre-Seed SAFE Financing Summary.
